Populatieverloop van Bontbekplevier, Strandplevier en Dwergstern nader onder de loep genomen

Kees Koffijberg

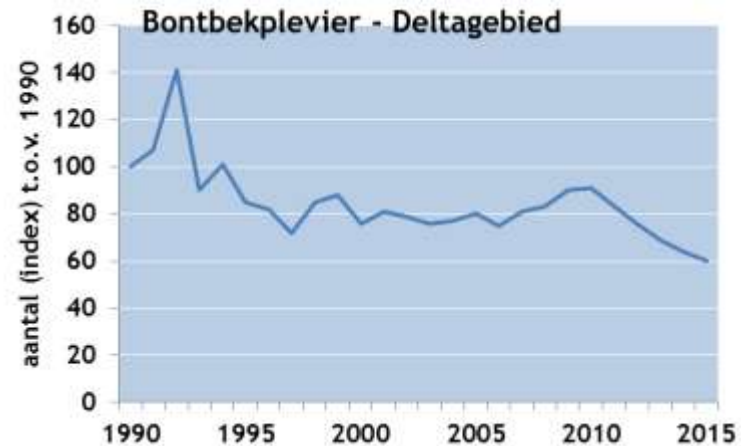

Sovon Vogelonderzoek Nederland

Bontbekplevier neemt gestaag af

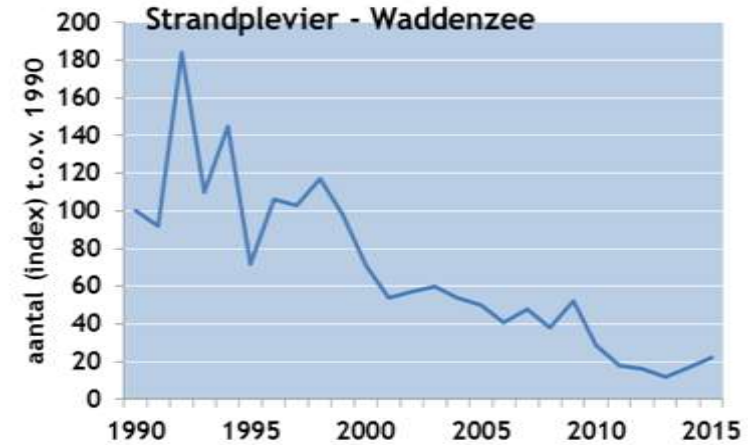

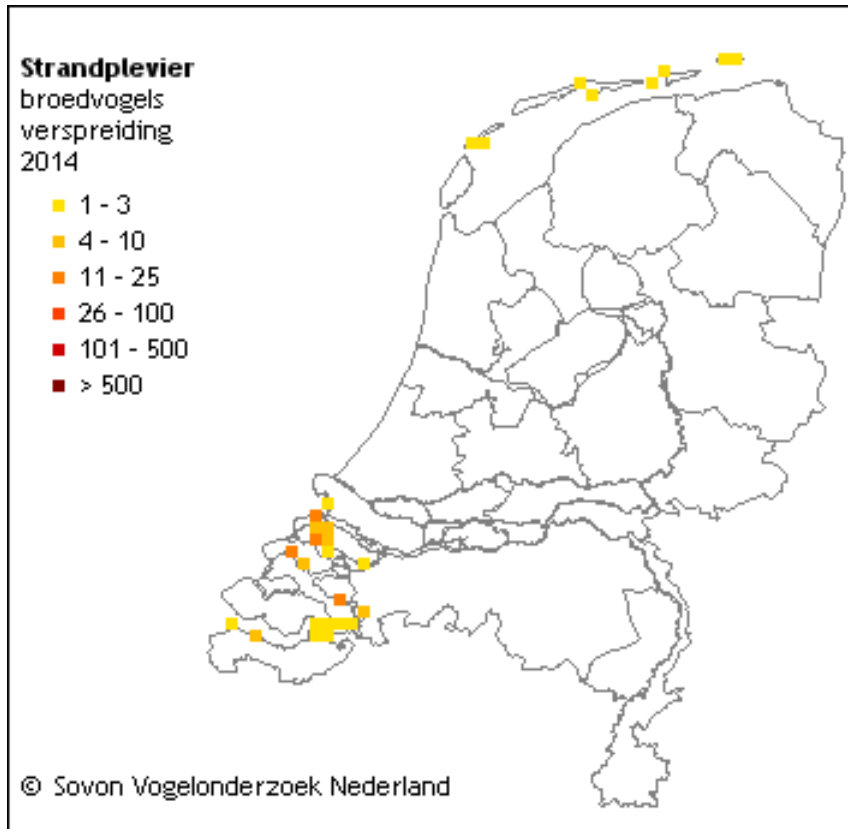

>1990 afname gem. 2% / jaar*
2014: 59 broedparen

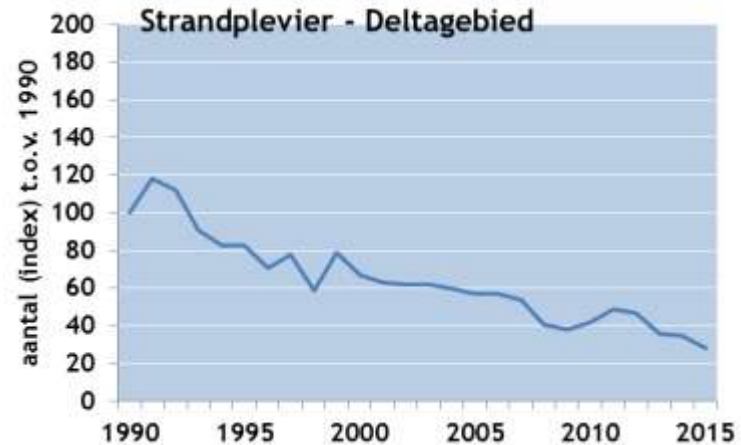

>1990 afname gem. 1% / jaar*
2014: 133 broedparen

Strandplevier vrijwel verdwenen in de Waddenzee

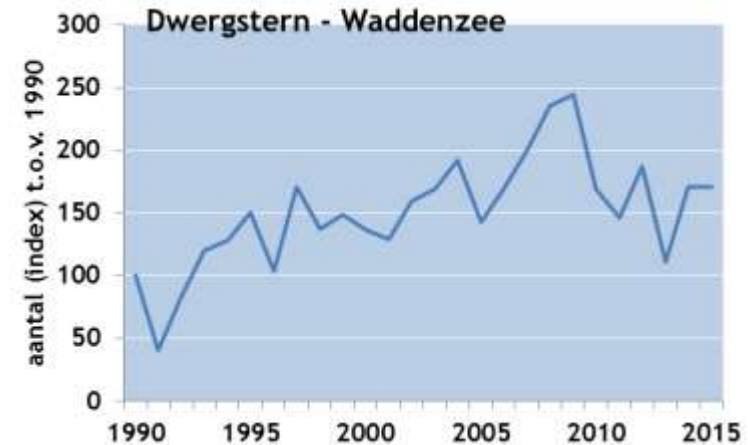

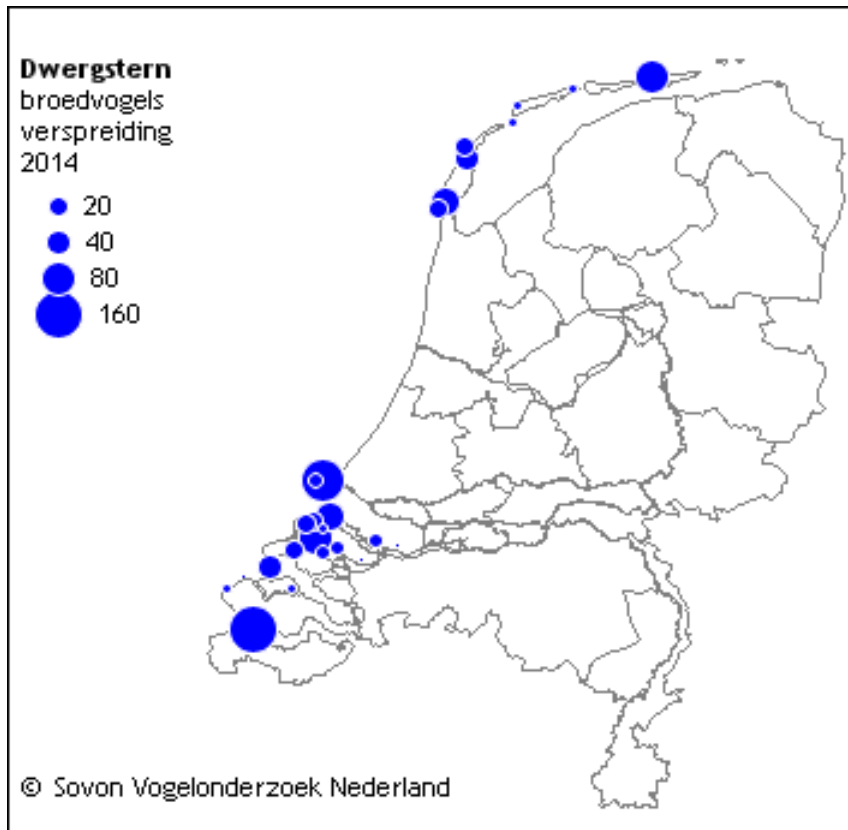

> 1990 afname gem. 7% / jaar*
2014: 13 broedparen

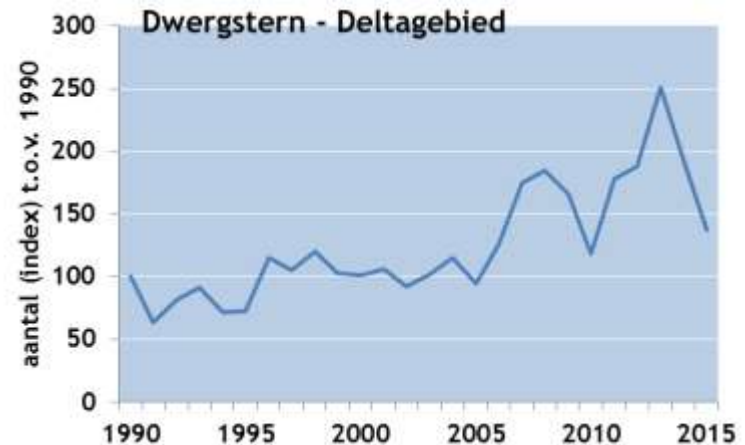

> 1990 afname gem. 4% / jaar*
2014: 125 broedparen

Dwergstern vertoont overall positieve ontwikkelingen

Sinds 1990 toename gem. 2% / jaar*
2014: 232 broedparen

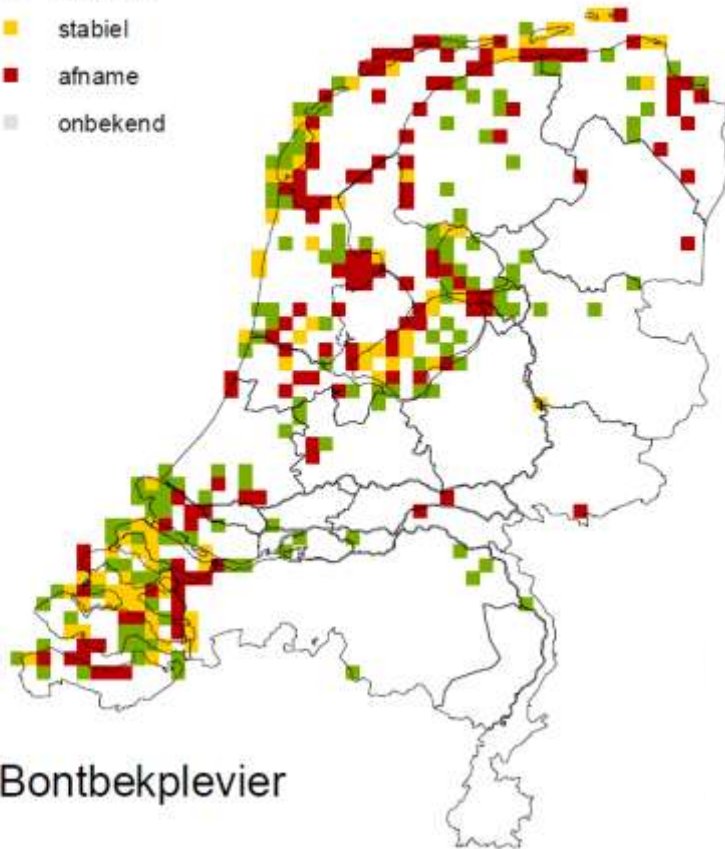

Sinds 1990 toename gem. 4% / jaar*
2014: 570 broedparen

Ruimtelijke veranderingen volgens nieuwe Vogelatlas (voorlopig en incl. mogelijk broedend!) - 2013-2015 vergeleken met 1998-2000
